ADDENDUM NO. 1

RFP 2M23-16 PROFESSIONAL DESIGN AND ENGINEERING SERVICES FOR THE FY 23-24 SB1 STREET REHABILITATION PROJECT

June 5, 2023

NOTICE TO ALL

The following clarification is issued for the proposed project:

1. Please review the following
Attachment A: Questions and Answers

Issued by:

Robert Bias
Engineering Technician
Public Works Department

Answers to RFI's for RFP 2M23-16

Professional Design and Engineering Services for the FY23-24 SB1 Street Rehabilitation Project

1. Under Section 1 Purpose, Scope of Work and Fee, on page 4, it is indicated that “the design phase shall be completed in 90 working days from your proposal being awarded.” Is the City wanting an actual schedule included in the proposal response?

The consultant is responsible to take their own approach and experience when adhering to the proposal format and defining the scope of work when submitting their proposal

2. Would it be counted as part of the 25-page limit requirement?

If a design schedule is provided, it will be counted toward the 25-page limit

3. Would a front and back cover be counted as part of the 25-page limit requirement?

The front and back hard covers will not be counted toward the 25-page limit

4. Under Section 1 Topographic Survey it indicates “Where full depth reconstruction of pavement is recommended, consultant will perform a design/topographic survey necessary to complete construction plans with cross-sections and profiles of the proposed street improvements. ...” The RFP does not appear to identify which streets are anticipated for full depth reconstruction, so how should the prospective consultant determine the need for topographic survey?

The latest Pavement Management Program will be provided as a resource to the consultant selected. Please see the included table which provides PCI for each given street segment that is part of this project for more information. The consultant shall recommend which street segments should be full depth reconstruction. The consultant is responsible to take their own approach, experience and research on which street segments they will recommend full depth reconstruction. The soil reporting is still required for the full depth reconstruction segments as it is stated in the RFP. The Pavement Management Plan will be provided for prospective consultants to review and utilize to determine

5. For the purposes of the proposal, is there a list of streets we should assume require full depth reconstruction and correspondingly topographic survey?

Please see the included table which provides PCI for each given street segment that is part of this project for more information. The consultant shall recommend which street segments should be full depth reconstruction.

6. Hidalgo Ave is also a part of the City's pending water main replacement project which was sent out for RFP. Given that this project design will parallel with this one, shall we assume that this street will be replaced with another street in the same overall area? This will help avoid street rehabilitation which may precede water main replacement (for Hidalgo Ave).

The City will wait until a consultant is selected before we make that determination

7. Does the City have a budget for this project at this time? Based on recent street projects, we estimate roughly \$2M to \$2.5M.

The City budget for construction is roughly \$2M
